Cruise Control

The Beginning:

Cruise Control was developed and is maintained by Landmark Forestry LLC of Horner, West Virginia. The program was first produced in 2000 from the necessity for an easy, fast, and accurate method of entering data while cruising. Since then, there have been several new versions of the program released with new features added and old features improved. We listen to our clients on what features they would like to see and what would make the program more usable for them when creating new versions.

What is Cruise Control?

This powerful program is used to assist in timber cruising. It runs on handheld pocket computers and desktops. As you cruise, you enter the data that you are collecting and when you report back to the office you upload your cruise to a computer. You can then use the desktop version of the program to edit the cruises and print out personalized reports for your company's specific needs and your client's requests. We are constantly updating and improving the functionality of the program.

The image shows a composite of three software screens. At the top is the 'Select Reports' dialog box with various options for report generation. Below it is the 'Tree Data Entry' screen, which is a grid-based data entry interface with columns for species codes (MISC, MSHR, MSHW, MSSW, PIN, PXL, RM) and rows for measurements like DBH, Height, MHT, and PHT. At the bottom right is the 'Reports Screen', which displays a '100% Tally' table with columns for species codes (LP, BC, AB, BG, BL, BO, BSW) and rows for measurements (M, 5, 10, 15, 20, 25, 30, 35).

Features/Highlights:

- Easy as "Dot Tally" data entry
- Easily combine your cruise with other cruises once back at the office
- Customize your species codes and grades within the program
- Choose from stand, stock, statistics and customized reports
- Flexible pricing methods. Price by species, diameter products, grades
- Safe and reliable data collection. Backups are made to compact flash and secure digital storage cards while cruising
- Designed for ease of use by the field forester
